THERE FOR  
FRESH AIR**

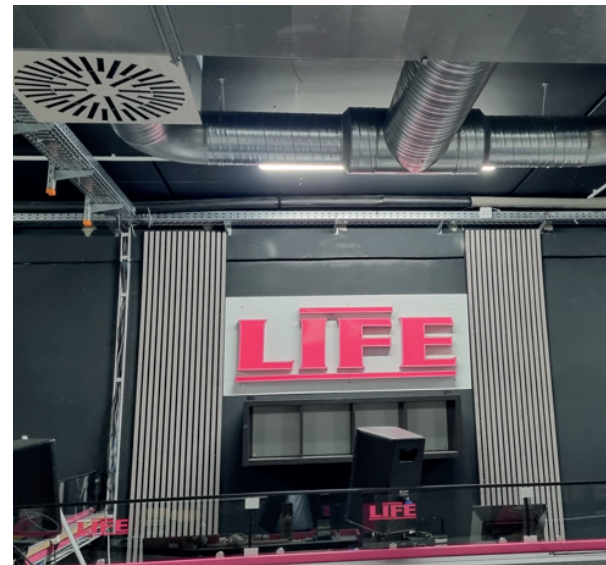

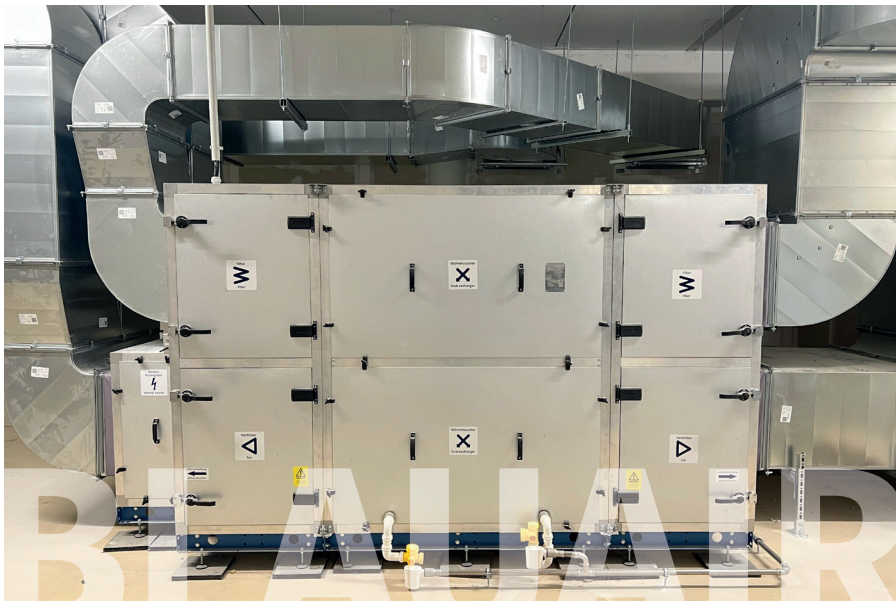

# PARTY MEETS FRESH AIR

## New club hosts ventilation

With an area of over 1.000 m<sup>2</sup> for party nights on two floors, the club Dancehall LIFE in Cloppenburg in north-western Germany needed a high-performance and reliable ventilation solution. In the large hall, a BlauAir CFH 9000 HE (electric heater) S21 with a S25 control panel exchanges an air volume of 9000 m<sup>3</sup> per hour at a pressure of 200 Pa. The central ceiling-mounted ventilation unit KOMFORT EC DBE 900 L S21, also with the S25 control panel, provides energy-efficient and effective supply and exhaust ventilation in the adjacent rooms containing the backstage area, kitchen and bathrooms. Both ventilation units have Wi-Fi and can also be controlled using the Blauberg Home App. The project was planned and realised by the company Wulfekuhl GmbH & Co. KG.
